

ExxonMobil awards EPC contract to TR for the expansion of its Singapore refinery

Técnicas Reunidas (TR) has been selected by ExxonMobil to undertake the engineering, procurement and construction (EPC) for the process units at its Singapore refinery expansion project.

This EPC contract, a continuation of TR's work as FEED contractor, is part of a multi-billion dollar investment by ExxonMobil in Singapore.

This expansion aims to produce higher-value products from fuel oil. TR will assist ExxonMobil to achieve this by undertaking EPC works for several refining units based on ExxonMobil's proprietary technologies, other licensed technologies and other units.

TR's scope includes hydro-processing conversion units, sulfur recovery, hot oil system and associated offsites and utilities.

The LSTK (lump sum turnkey) contract has a value of approximately US\$1.5 billion over a duration of 43 months.

This award marks the second standalone award by ExxonMobil to TR and further strengthens TR's presence in South East Asia.

TR has extensive experience in Oil Refining with more than 400 units (29 being Hydrocrackers) designed and built, working with the latest technologies.

Técnicas Reunidas is one of the main international engineering and construction companies in the sectors of oil and gas production, refining, petrochemical and power generation for a wide range of clients worldwide. Since 1960 it has designed and built over 1000 industrial plants in over 50 countries.
